DOI: 10.1112/mtk.70055

The factor $\log(dx)$ introduced in the error term at the bottom of p. 14 should read $\log(d\Delta x)$. Consequently, $x^{1/2+o(1)}$ in the error term of (4.2) should be replaced by $x^{1/2+1/B+o(1)}$. Since $B > 2$, this error term remains negligible compared with the main term and does not affect subsequent arguments.

We thank Daniel Johnston and Sunil Naik for bringing this issue to our attention.
